Total inc GST \$

Please note any measurements and body or trailer detail that may assist and fax to us for model selection / fitting requirements and quote.

* Wind Tunnel testing has shown that best performance is achieved where the maximum depth of the NoseCone is at least level or slightly below the tow vehicle roof height.

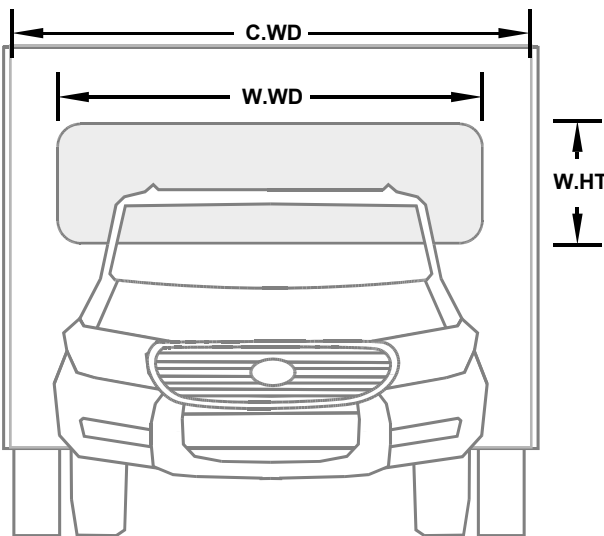

More coverage is better especially with larger gap over 1.2 metres as the tow vehicle is offering no aerodynamic assistance to the trailer.

1. Does your Caravan have a front window? **Yes / No** (Circle One)

2. Do you wish to open it in future? **Yes / No** (Circle One)

Why do we ask this? - - Caravans do not always have windows, or customers intend to fit the NoseCone over (and permanently seal) the front window so no hinge is required (we call this 'permanent fixing'). The NoseCone must still exceed the size of the window or window cover.

If you want to open the window, we can supply our proprietary hinge kit (as an optional extra) to allow the NoseCone to have an awning style opening. Alternatively you can fit your own hinge (eg stainless piano hinge) and hold down system.

3. **C.WD** Caravan Width
Front Wall Width BETWEEN CORNER STRIPS

4. **W.HT** Window Height
Height of window or window cover

5. **W.WD** Window Width
Width of window or window cover

6. **SWS** Straight Wall Section
Caravan Front Wall FLAT SECTION only

7. **W.TD** Window Top Down
Flat section of wall above window (for hinge / fit clearance)

8. **C.OH** Caravan OA Ht
Caravan height from Ground to roof

9. **C.HT** Caravan Height
Body Height of Caravan

10. **V.HT** Vehicle Height
Ground to Roof of Towing Vehicle

11. **DIF** C.OH - V.HT
Difference in Trailer and Tow Vehicle Height

Tow Vehicle
